With the goal to empower professionals and business across the globe, we offer more than 1500 training courses, which are delivered by Multisoft's global subject matter experts. We offer tailored corporate training; project Based Training, comprehensive learning solution with lifetime e-learning access, after training support and globally recognized training certificates.

About Course

The Certified Data Privacy Solutions Engineer (CDPSE) training by Multisoft Systems is designed to equip professionals with the knowledge and skills necessary to implement and manage secure data privacy solutions.

Module 1: Privacy Governance (Governance, Management & Risk Management)

- ✓ Identify the internal and external privacy requirements specific to the organization's governance and risk management programs and practices.
- ✓ Participate in the evaluation of privacy policies, programs and policies for their alignment with legal requirements, regulatory requirements and/or industry best practices.
- ✓ Coordinate and/or perform privacy impact assessments (PIA) and other privacy-focused assessments.
- ✓ Participate in the development of procedures that align with privacy policies and business needs.
- ✓ Implement procedures that align with privacy policies.
- ✓ Participate in the management and evaluation of contracts, service levels and practices of vendors and other external parties.
- ✓ Participate in the privacy incident management process.
- ✓ Collaborate with cybersecurity personnel on the security risk assessment process to address privacy compliance and risk mitigation.
- ✓ Collaborate with other practitioners to ensure that privacy programs and practices are followed during the design, development and implementation of systems, applications and infrastructure.
- ✓ Develop and/or implement a prioritization process for privacy practices.
- ✓ Develop, monitor and/or report performance metrics and trends related to privacy practices.
- ✓ Report on the status and outcomes of privacy programs and practices to relevant stakeholders.
- ✓ Participate in privacy training and promote awareness of privacy practices.
- ✓ Identify issues requiring remediation and opportunities for process improvement.

Module 2: Privacy Architecture

- ✓ Coordinate and/or perform privacy impact assessment (PIA) and other privacy-focused assessments to identify appropriate tracking technologies and technical privacy controls.
- ✓ Participate in the development of privacy control procedures that align with privacy policies and business needs.
- ✓ Implement procedures related to privacy architecture that align with privacy policies.
- ✓ Collaborate with cybersecurity personnel on the security risk assessment process to address privacy compliance and risk mitigation
- ✓ Collaborate with other practitioners to ensure that privacy programs and practices are followed during the design, development and implementation of systems, applications and infrastructure.
- ✓ Evaluate the enterprise architecture and information architecture to ensure it supports privacy by design principles and considerations.
- ✓ Evaluate advancements in privacy-enhancing technologies and changes in the regulatory landscape.
- ✓ Identify, validate and/or implement appropriate privacy and security controls according to data classification procedures.

Module 3: Data Lifecycle

- ✓ Identify the internal and external privacy requirements relating to the organization's data lifecycle practices.
- ✓ Coordinate and/or perform privacy impact assessments (PIA) and other privacy-focused assessments relating to the organization's data lifecycle practices.
- ✓ Participate in the development of data lifecycle procedures that align with privacy policies and business needs.
- ✓ Implement procedures related to data lifecycle that align with privacy policies.

- ✓ Collaborate with other practitioners to ensure that privacy programs and practices are followed during the design, development and implementation of systems, applications and infrastructure.
- ✓ Evaluate the enterprise architecture and information architecture to ensure it supports privacy by design principles and data lifecycle considerations.
- ✓ Identify, validate and/or implement appropriate privacy and security controls according to data classification procedures.
- ✓ Design, implement and/or monitor processes and procedures to keep the inventory and dataflow records current.
